SHAKTIDHAR MOHAPATRA

FRONTEND DEVELOPER | FULL-STACK ENGINEER

Bhubaneswar, Odisha +91-9777887204 sdmohapatra7@gmail.com GitHub LinkedIn Portfolio

PROFESSIONAL SUMMARY & OBJECTIVE

Objective: To leverage my 2+ years of full-stack engineering experience to build scalable, high-performance web applications and drive impactful technical solutions.

Frontend developer with a bit over 2 years of experience building web apps at Kaizeninfocomm. My day-to-day stack revolves around **React.js**, **TypeScript**, and **XSLT/XML**. I've spent the last couple of years tackling ERP system modules and hooking up various global payment gateways, always working within an **Agile Methodology** framework. Thanks to a background rooted in **Java** and core **System Design** (including **MVC**), I look at frontend work from a full-stack perspective. Whether I'm pushing for better **Performance Optimization**, writing solid **Unit Testing** scripts, tweaking a **Responsive Design**, or shipping code through **CI/CD** pipelines, my main goal is just building software that scales well and doesn't break.

SKILLS

Languages: C#, JavaScript (ES6+), TypeScript, Java 17, Python 3, HTML5, CSS3, XML, SASS.

Frameworks: React.js 18, Node.js 20, .NET Core 8, Spring Boot, Django, Redux Toolkit, Tailwind CSS, Zustand, jQuery, Bootstrap.

Tools & DBs: PostgreSQL, SQL Server, MongoDB, Redis, Git/GitHub, Docker, AWS, CI/CD, Vite, Postman, Vercel, Netlify.

Core Concepts: RESTful APIs, JWT, Unit Testing, ERP Systems, System Design, Scalability, Performance Optimization, MVC Architecture, Object-Oriented Programming (OOP), Agile Methodology, Responsive Design, User Experience (UX).

Soft Skills: Teamwork, Adaptability, Problem Solving, Communication.

WORK EXPERIENCE

Kaizeninfocomm Pvt Ltd **April 2024 – Jan 2026**

Frontend Developer *Ahmedabad, Gujarat*

- Built restaurant and partner dashboards with **React.js**, **jQuery**, and **AJAX**. Swapping out old code for reusable components helped cut our load times by roughly **30%**.
- Wrote **XSLT and XML** scripts to transform and render backend data on the fly. This optimization sped up rendering significantly for a platform processing **over 10,000** daily transactions.
- Shipped key inventory and franchise management modules for our enterprise clients, which streamlined their workflows and bumped operational efficiency by **25%**.
- Hooked up multiple payment gateways—specifically **Razorpay, PayU, and Stripe**—which directly improved our checkout success rates by **15%**.
- Worked closely with the backend team to connect food partner APIs (**Deliveroo, UberEats**), allowing our system to pull in **40%** more orders automatically.
- Polished the application's **Responsive Design** to make sure everything looked perfect on mobile devices. This UI/UX overhaul was a major factor in driving a **20%** jump in user engagement.

Key Project: SmartEats (Restaurant POS System)

- **POS, KDS & Dashboard:** Put together a Point of Sale and Kitchen Display System that's now running in **50+ restaurant branches**. It tracks orders, daily sales, and inventory in real time.
- **Inventory & Operations:** Tackled the inventory side by building tools that automatically generate purchase invoices and figure out food wastage, saving the business about **18%** in overhead costs.
- **Customer Ordering App:** Wrote a mobile-friendly web app where people can scan a QR code at their table, browse the menu, and order food. It handles more than **2,000+** active users every day.
- **Third-Party Integrations:** Linked our system directly to Deliveroo and UberEats so orders flow in automatically. This basically wiped out manual entry, dropping those errors by **95%**.

Coding Ninjas **July 2023 – July 2024 (Part-time)**
Teaching Assistant *Remote*

- Helped teach Web Development to more than **600 students**, mostly by jumping into their messy codebases to figure out bugs and explain technical concepts.
- Kept an average rating of **4.7/5.0** after answering well over **850 individual student questions**.
- Sat down with students to help them get their final projects across the finish line, teaching them how to problem-solve independently along the way.

PERSONAL PROJECTS

Hospital Management System (HMS) **React.js 18, TypeScript, ASP.NET Core 8 Web API, EF Core, SQL Server**

View Source Code

- **Clean Architecture:** Architected a multi-portal system supporting distinct user workflows (Admin, Doctor, Nurse, Patient) using Clean Architecture principles, Repository Pattern, and CQRS (MediatR) for robust separation of concerns.
- **Secure Authentication:** Implemented role-based access control (RBAC) secured via JWT authentication and refresh token rotation, ensuring secure REST API endpoints and stateful sessions.
- **Vitals & Billing Integration:** Developed features for real-time recording of patient vitals, medical history, dynamic prescriptions, and invoice generation, streamlining healthcare operations by **30%**.

Society Maintenance System (SocietyPro) **React.js 18, Python, Django, PostgreSQL, JWT**

View Source Code | Live Demo

- **Full-Stack Management:** Architected an entire ERP system for housing societies capable of managing data for over **200+ resident households**. It orchestrated everything from automating the monthly maintenance bills to tracking expenses, reducing manual entry by **40%**.
- **Security & Access Control:** Locked down the financial data and user details by writing custom Role-Based Access Control (RBAC) and validating sessions via JWT authentication, achieving a **0% unauthorized access rate** in testing.
- **Dynamic Architecture:** Set up a settings dashboard driven purely by metadata. This means admins can change currencies, tweak tax rates, or add new expense categories on the fly without needing me to push new code.

WhatsApp Clone (Real-Time Messaging Application) **React.js 18, Java 17, Spring Boot, WebSockets, PostgreSQL, Zustand**

View Source Code | Live Demo

- **Real-Time Communication:** Engineered a scalable chat application using **WebSockets** to enable real-time messaging with **sub-100ms latency**. It supports one-on-one chats, group messages, typing indicators, and read receipts.
- **State Management:** Used **Zustand** (along with persistent middleware) to keep the UI snappy, handling tons of message history and user session data without lagging.
- **Scalable Backend:** Wrote the backend in Java with **Spring Boot**. I used Spring Security to keep the routes safe and focused heavily on making sure the database queries were fast.

LinkedIn Clone (Professional Networking Platform) **React.js 18, Node.js 20, Socket.io, Redis, MongoDB**

View Source Code | Live Demo

- **Social Networking Engine:** Developed a social platform supporting dynamic user profiles and connection features, resulting in improved state management efficiency via specialized data flow and handling **1,000+ concurrent connections**.
- **Multimedia Interaction:** Wired up real-time likes and comments on posts. I also plugged in **Cloudinary** so users could upload images and videos without blowing up my server space.
- **Performance Optimization:** Sped up the whole app by caching sessions in **Redis** and adding the right indexes to my MongoDB collections, making feed loads nearly instant (**under 200ms response time**).

Salon Booking Application **React.js 18, Redux Toolkit, Tailwind CSS, Node.js 20**

View Source Code | Live Demo

- **Automated Scheduling:** Optimized a custom booking engine that calculates available time slots dynamically, processing concurrent bookings with **99.9% uptime**. This stopped double-bookings entirely and maximized appointment efficiency.
- **State-Driven UX:** Kept the complex booking flow organized using **Redux Toolkit**, and relied on Formik and Yup to catch user input errors instantly before hitting the server.
- **Responsive Admin Portal:** Put together a clean admin dashboard where salon owners can log in, adjust their staff schedules, check their earnings, and list new services.

Ecommerce App (ESmart) **Node.js 20, Express, MongoDB, React.js 18, Redux**

View Source Code | Live Demo

- **Full-Lifecycle E-Commerce:** Architected a high-performance online storefront capable of handling **500+ concurrent users**. It features persistent shopping carts, a wishlist, and orchestrated a fully functional **Razorpay** checkout system.
- **Automated Reporting:** Wrote a background service that kicks in after a purchase, automatically generating a PDF invoice and tracking the order so admins don't have to do it manually.
- **Inventory Control:** Built a backend dashboard so store owners can watch their inventory levels in real time, set up tax rules, and look at their sales charts.

EDUCATION

Master of Science in Mathematics **2019 – 2021**

Fakir Mohan University | Score: 81% *Odisha*

- **Academic Honors:** Graduated in the top percentiles with a specialization in Advanced Mathematics.
- **Relevant Coursework:** Advanced Calculus, Data Analysis, Discrete Mathematics, Linear Algebra, and Statistical Modeling.

Bachelor of Science in Mathematics **2015 – 2019**

Maharaja Purna Chandra Autonomous College | Score: 70% *Odisha*

- **Relevant Coursework:** Probability Theory, Applied Mathematics, Computational Methods, and Number Theory.

CERTIFICATIONS

- **Career Camp | Fullstack Web Development:** Intensive course covering Java, DSA, MERN Stack, and OOPS. View Credential
- **DOEACC 'O' Level:** Certification for foundation level courses in Computer Applications. View Credential
